

SRT KIT

Our SRT kit is adjustable, easy to use, compatible with all of the chest ascenders on the market, and takes up little space! A highly efficient way to SRT.

SRT ASCENT

DESCRIPTION

A good set for SRT: a foot loop and an adjustable neck loop in their storing pouch, little space and very light. The FOOT LOOP can be fixed on the shoe with a carabiner, or the shoe slipped into the adjustable loop. It is easy to use and can be adapted to any knee ascender as well as the climber's size.

No need to take off the helmet to put the SRT NECK LOOP on or take it away, it keeps the knee ascender in upright position during the ascent. All is stored away in the SRT BAG, attached to the back of the harness. With its stiff rim, it is easy to find the gear stored inside, yet the lining drawstring secures it.

TECHNICAL INFORMATION

Foot loop

Upper strap length: adjustable from 1 to 1.30 m (3.2 to 4.2 ft)
 Lower strap length: adjustable from 0.35 to 0.6 m (13.8 to 23.6 in)
