

# STING & STAY

Felling is hard on both professionals and their equipment. That's why we designed our Sting and Stay climbing spurs to be strong, durable, and functional.

## CLIMBING SPURS

## DESCRIPTION

The shanks have an ergonomic design:

- the upper part follows the position of the tibia,
- the lower part ensures comfortable arch support.

The calf pad fits securely thanks to the large, flexible leather strap which attaches with a wide Velcro band. It fits snugly around the calf. Light-coloured, rigid leather combined with synthetic felt ensures the shank supports the tibia.

The gaffs drive in and pull out effortlessly. The side cutting edges cut the wood grain and the gaff's lower flat surface leans on the wood grain. The curved form makes it powerful and ensures hold on the trunk in any position. Pyramid shape allows for effortless pull out. It also permits easy honing (two flat planes).

## TECHNICAL INFORMATION

Shank	painted stainless steel. 2 sizes : S for body height < 1.75 m and L for body height > than 1.75 m
Calf pads	supple leather (black), rigid leather (brown) fitted with thick felt and attached with a wide Velcro band.
Underfoot plate	stainless steel
Gaffs (5 cm - 2 in)	forged stainless steel
Weight	3 kg (6.6 lb)
