

WOODEN RETRIEVAL BALL

This wooden retrieval ball is a very useful accessory to retrieve an anchor from a distance.

ANCHORING ACCESSORY

DESCRIPTION

The dyneema line helps tie it to the end of a rope, so that it will lock itself in the anchor's retrieval part and help bring both anchor and rope back to the ground.

Comes in two diameters: Ø 22 mm (0.86 in) and Ø 30 mm (1.18 in).

The Ø 22 mm (0.86 in) version can easily retrieve the CHOKER JOKER, as well as other cambium savers (PETZL, CAMP, FTC, etc.) -with the exception of cambium savers with rings.

The Ø 30 mm (1.18 in) retrieval ball allows retrieval of any cambium saver with rings, whether the rope is spliced or not.

TECHNICAL INFORMATION

Retrieval ball Natural Boxwood

Line

Ø 1.6 mm - 0.06 in (MBS 220 daN)
