

SPLICING KIT

Splice-making is part of our history and contributed largely to who we are today. Several years ago, we created our first Slim splices that can pass easily through mechanical systems such as Freexion, ZigZag, and SpiderJack. Even now in our workshops, we splice ropes every day with these needles and fids. You too can use professional materials to make your own splices on all double-braided ropes—including all PPE-range ropes on the market.

SPLICING ACCESSORY

DESCRIPTION

A great look with black anodisation, its fids engraved with their diameter for a quick identification, this splicing kit will be the perfect help when splicing your ropes. It is composed of one round-end needle and 5 fids that will be screwed to it.

The needle is great to handle, its smooth surface won't pull any thread when passing in the rope. It is easy to change fids, thanks to the needle thread, and the fid's inside thread prevents the ropes from getting out too easily.

Needle and fids can be bought separately.

TECHNICAL INFORMATION

Needle	Round-end aluminium needle	8 mm diameter	20 cm long (including thread)
Fids	5 cone-shaped aluminium fids with engraved diameter	Diameters 8 mm, 10 mm, 12 mm, 14 mm and 16 mm	
Colour	Black (anodisation)		
Use	Can be used with all types of ropes from 10 to 18 mm (double braid, hollow braid, parallel core)		
Weight	Needle: 0.9 oz (27 g) Fid Ø 8 mm: 0.1 oz (2 g) Fid Ø 10 mm: 0.1 oz (3 g) Fid Ø 12 mm: 0.2 oz (6 g) Fid Ø 14 mm: 0.2 oz (7 g) Fid Ø 16 mm: 0.5 oz (15 g)
