

# STUFF BAG

We first developed that bag for our GRAPPIN, but a PVC and polyester stuff bag is just as practical to store and protect so many accessories: reeving kit, lanyard, ORVET slings etc. It is sturdy, stable and simple to use – just fix it to your harness and it will follow you to all work sites.

## STUFF BAG

## DESCRIPTION

Robust and functional, the FTC TREE stuff bag is there to help your organise and transport the essential gear on site. It is made of resistant material (PVC and polyester) and keeps its shape when standing –even empty: this way you access quickly to your gear. A drawstring with tanka is used to keep the content safe while allowing for a quick opening/closing, even with gloves.

Initially developed to store the GRAPPIN, it is just as useful to protect a reeving kit, a lanyard, a few ORVET slings or any other accessory you want to keep at hand.

Inside, you can fix the end of a lanyard, a sling or any other tool to a fabric ring – easy access. We also added two inner pockets (15 x 15 cm – 5.6 x 5.6 in) with a velcro closure to store smaller elements like a throwbag.

The bag is attached to your harness with two exterior fabric rings – this way, your hands are free when moving in the tree. Compact, light and versatile, it's a great ally to climbers who want to more efficiency and comfort at work.

## TECHNICAL INFORMATION

Material	80 % PVC, 20 % Polyester
Weight	210 g (7.5 oz)
Capacity	4,5 L
