

NEXAW

Work smoothly. Our NEXAW strop will secure your heavy tools and follow each of your moves without hindering your work or adding heavy gear. Light, flexible and elastic, it will keep your tools within reach, ready to use at any moment, while limiting the risk of an accidental fall.

TOOL STROP

DESCRIPTION

The NEXAW tool strop will hold your heavy tools (up to 15 kg) while giving you total freedom of movement. Of course, the most common use for arborists is with their chainsaw.

The elastic part helps it extend up to 140 cm, with a reduced bulk on the harness, so that it follows your moves unhindered, for smooth and efficient work in the tree.

The large stainless steel ring is used for a quick and reliable attachment to a tool-holding carabiner, for ease of connection. Depending on your preference, the NEXAW strop is connected to the tool either with a key ring -used as a breaking point, resisting about 70 kg shocks- or with a LOCKI carabiner -for a secure connection resisting about 200 kg, for a lesser risk of accidental opening.

Flexible, discreet and perfectly integrated to your equipment, the NEXAW keeps up with your moves, limits tension on the tool and keeps it ready for use. The accessory has been designed to secure your heavy tools, to simplify your work in the tree and get efficiency through smooth work.

 Keep in mind: this tool strop is NOT designed for personal protection. It is NO PPE.

TECHNICAL INFORMATION

	Version with keyring	Version with LOCKI
Length without load	70 cm (2.4 ft)	75 cm (2.6 ft)
Length with load	135 cm (4.4 ft)	140 cm (4.6 ft)
Weight	66 g (2.3 oz)	78 g (2.8 oz)
Material	Polyester/rubber, stainless steel	
Colours	Black / Beige	
Tool weight	Max. 15 kg	
Min. resistance	~ 70 kg	> 200 kg
