

SPURSBOX

The SPURSBOX is a semi-rigid bag developed for the protection and transport of your spurs. Robust and practical, it is also great to store the adjustment accessories at the same place.

PROTECTION COVER FOR SPURS

DESCRIPTION

When you aren't using your spurs, they deserve adequate protection during transport and storage. The SPURSBOX was developed for the efficient protection of your gear, also keeping it clean, organised and easy to manipulate in your daily work.

The semi-rigid sides will maintain your spurs during transport and storage, and we chose a strong fabric so that the bag can resist regular use on sites. Its size will fit most of the spurs on the market in a compact, practical cover.

Inside, important accessories can be tucked away in the large pocket: for example, adjustment tools and gaff protections can be safely stored in the same place.

The SPURSBOX can be carried with two handles, in vertical or horizontal position, depending on the situation and your work preferences.

Developed for practical and lasting use, the SPURSBOX offers a simple solution for the optimal protection and transport of your spurs.
