

RIGGING

ÉCLIPSE 3

RIGGING BLOCK

FOR HEAVY RIGGING

www.ftc-tree.com

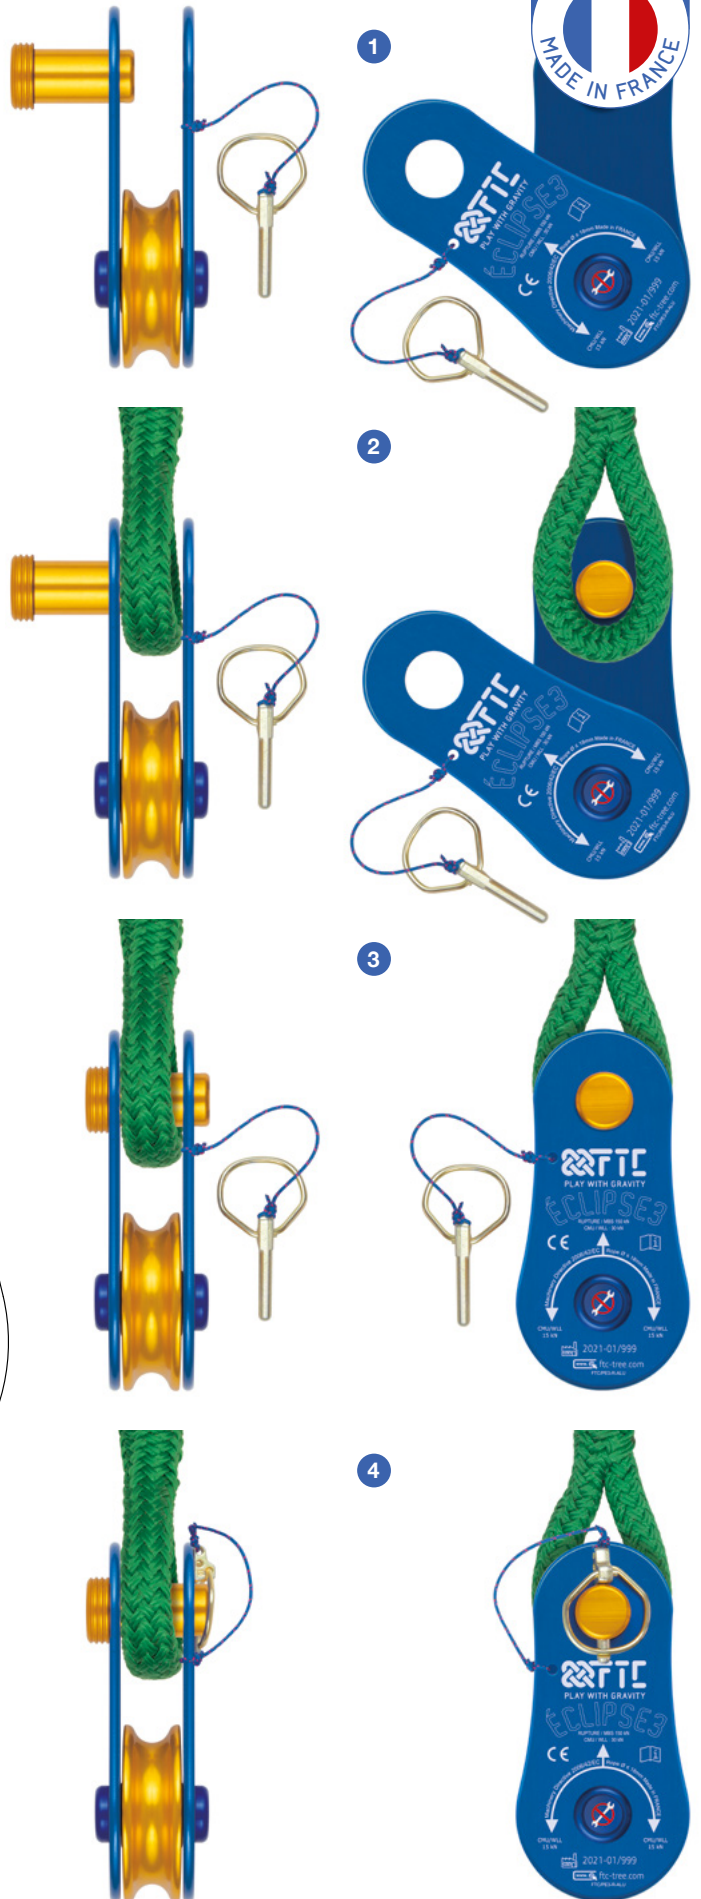

THE ÉCLIPSE IS A BLOCK DEVELOPED FOR RIGGING WORKS.

TECHNICAL DATA

- Aluminium sheave and cheek plates.
- Minimum Breaking Strength (MBS): 150 kN / WLL: 30 kN
Safety coefficient 5.
- For ropes \varnothing 18 mm maximum.
- Steel linch pin for safety (with attachment string).
- Weight: 1020 g (2.2 lb).

PERFORMANCES

It is a very resistant block. Its rotating cheek plates and movable upper axle make it easy to open and close. This axle is locked with a safety linch pin that can't be lost, since it is attached to the front cheek plate with a string.

The sheave is large and rounded, so that the check plates don't rub against the rope or damage it. Caution: the ÉCLIPSE is for textile ropes only, it cannot be used with metal cables.
